TRAINING FOR THE CYBERSECURITY JUNGLE:
NEWBIES TO EXPERTS IN NO TIME!

No expedition through the dense and unpredictable **jungle that is cybersecurity** would be complete without a well-prepared team. **Read on to turn your team from cybersecurity newbies to expert adventurers!**

The Basics - Equipping Your Team

Gear Up

Start by teaching the **basics of cybersecurity**, including:
- The importance of **strong passwords**
- Educating about **secure internet practices**
- Gaining familiarity with the organization's **IT policies**

Map Reading

Teach your team to read the signs. **This means looking out for:**
- Phishing emails
- Suspicious links
- Unusual requests

Advanced Training - Navigating the Terrain

First Aid

Just as adventurers need to treat injuries on the fly, employees should learn **basic cybersecurity first aid** - how to respond in the event of a security breach to **minimize damage.**

Lookouts

Every employee acts as a **lookout** in the cybersecurity jungle, monitoring for signs of cyber threats and **reporting suspicious activities.**

Continuous Education - Adapting to the Environment

Expert Guidance

We are **cybersecurity experts** that can set-up specialized training sessions, similar to having a seasoned explorer show you the ropes. These programs are essential to keep your team updated on the **latest threats and advances** in cybersecurity.

The human layer of cybersecurity acts as the collective vigilance needed to detect and deter potential threats.

Visit www.everon.co.uk to set up training for your team and **cut through the confusion** of cybersecurity!
